

Exploring Biodiversity Through Coding

As the last piece of our inquiry into the BP Oil Spill, you will now be required to complete a one page (typed) reflection on your knowledge of the impact this disaster had on the Gulf of Mexico, and to reflect on your experience coding this knowledge with Ozobots. Your reflection will need to include the following:

1. Describe what you learned about the impact the BP Oil spill had on the biodiversity of the Gulf of Mexico. Ensure you discuss the impact it had on humans, animals and plants. What could we, as humans, do to ensure that this type of disaster is avoided in the future? Make sure that you use scientific terminology when writing your reflection.
2. Describe your experience with the Ozobots. What did you like about using this technology? What did you find interesting about coding the Ozobot? What did you find challenging? If you were to do this activity over again, what would you do differently?

Please submit a rough draft of your reflection by Friday for feedback.
