

Robotics Game Design Deconstruction Part 4 of 4

Below is a possible set up for the game in this lesson. Feel free to add 3D objects around the play field ensuring there is sufficient room for the bot to navigate. Set this up on a table or desk. Butcher paper can be used if the surface isn't white. Be sure to tape the paper down sufficiently.

Also below is a template for the green and blue strips. Print in color or use the rectangular boxes and color them in the appropriate colors.
