

Use your Ozobot to choose a suffix and a root to make a word. Decide if the word is a real word. If yes, circle Y and write the meaning in the far right column. If no, add a different suffix to the root to make a word that is normally used, then write the meaning in the far right column. Only write a root + suffix combination one time. If your bot chooses the combo again, go back to start and choose again

	Root	+	Suffix		What word does it make?	Do these go together?		If no, use the root with a different suffix	What does the word mean?
